

Abdominal Lift

The multiple pregnancy, with or without cesarean section produces excessive skin and fat in the lower abdomen. Regain your pre-pregnancy waistline with this lift.

Brief Procedure Description: The removal of this tissue flattens the abdomen and allows the muscles to be tightened.

Suction Lipoplasty

Commonly referred to as Liposuction, this procedure helps eliminate excess fat from the body in areas such as the thighs, hips and stomach, giving the appearance of a thinner you.

Brief Procedure Description: Excessive tissues of fat can be removed from areas in the body by a suction machine. This procedure can be done only if the skin overlying the area is tight and has maintained elasticity.

Other cosmetic surgery procedures can be done to improve your appearance. *Call now to set up a consultation 813-238-0409.*

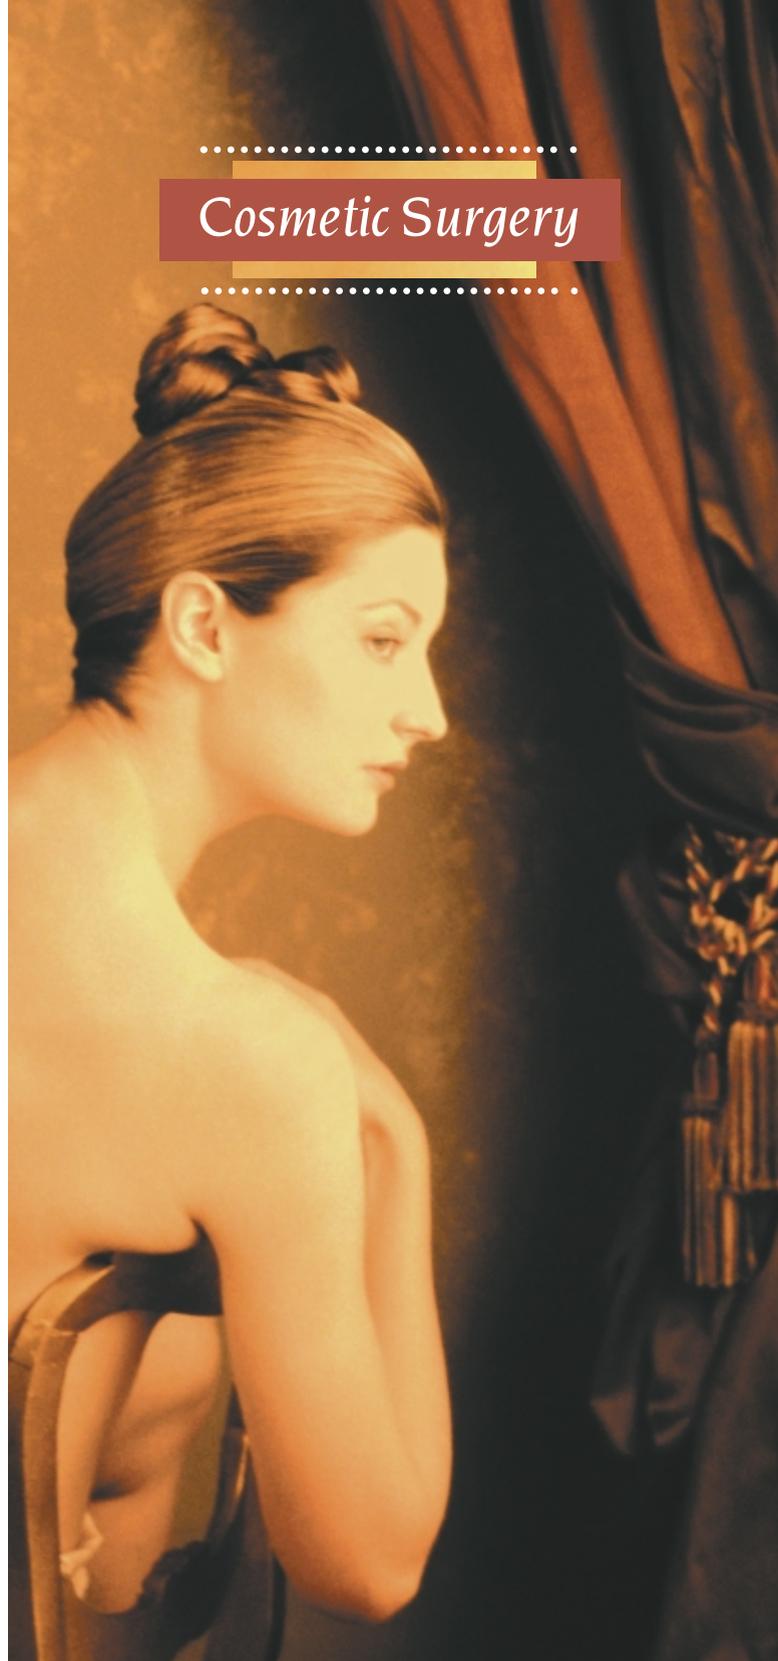

Cosmetic Surgery involves an operative procedure requiring sterile conditions and controlled operating room environments. Incisions are placed in areas that produce less noticeable scars, and if possible, in areas that are concealed. *If you have any questions, call to set up an appointment and ask for a consultation.*

Cosmetic Surgery

Cosmetic Surgery

Cosmetic Surgery is a form of reconstructive surgery that can reshape your body, allowing you to improve your appearance and increase self-esteem. From your hips to lips or eyes to thighs, there is a surgical procedure for you. Get the breasts you've always wanted or erase the wrinkles you've always hated.

With 30 years of experience, Dr. Habal can help you have the look you've always wanted.

Call now to set up a consultation 813-238-0409.

An initial consultation helps Dr. Habal understand the extent of your problem and desires, allowing him to determine the treatment that is right for you. He will explain why you must have a realistic understanding of the procedure and an understanding of the impact of the outcome and the overall results.

Dr. Habal's most common procedures are listed below:

Face Lift

Also referred to as rhytidectomy, a face-lift helps to rejuvenate your face by eliminating wrinkles, baggy jaws, sagging face and neck skin caused by aging, sun exposure and environment.

Brief Procedure Description: Excessive skin is removed from the face to tighten the skin and flatten the wrinkles, giving you a more youthful appearance.

Eyelid Plasty

Do you have wrinkled folds of skin on your upper eyelids or fullness under your eyes? Eyelid plasty is the surgery for you.

Brief Procedure Description: Skin that produces the wrinkled folds of skin on the upper eyelids is removed to produce a younger look. Lower lid fat that produces fullness beneath the eyes is removed and the skin is tightened.

Brow Lift

Do you have lines or wrinkles on your forehead? Remove them with a brow lift.

Brief Procedure Description: Excessive skin is removed from your brow in order to give the appearance of a smooth, lineless forehead.

Neck Lift

As most women discover with age, gravity can take its toll on the neck and under the chin. A neck lift will tighten skin on the neck and under the chin, giving it a firm look.

Brief Procedure Description: The fat is removed and the skin is tightened to regain its youthful appearance and shape.

Breast Enlargement (Augmentation)

Many women wish to enhance their appearance by changing the shape and size of their breasts. Women can enlarge or augment the shape of their breasts with the addition of breast implants. This procedure is very common and produces one of the most satisfactory outcomes.
